When a Bro meets a chick, he shall endeavor to find out where she fits on the Hot/Crazy Scale before pursuing her.

The theory of evolution alleges that men evolved from monkeys . . . but what about women? It seems that as men became less hairy, more upright, and less interested in throwing their own poo, women became more attractive but somehow *more* crazy.

Today's chicks like to straddle the line between hot and crazy: the hotter they are, the crazier they are; the crazier they are, the hotter they seem. All of this is confusing to a Bro and, very often, dangerous. How is a Bro to know whether a chick is hot and crazy in a "let's duck into the bathroom" kind of way, or hot and crazy in a "let's huff paint and stalk your ex-girlfriends" kind of way?

Fortunately, I've devised a test that allows Bros to quickly determine where a chick fits on the Hot/Crazy Scale. Answer yes or no to each question in the columns, add up your "yes" answers, and then plot the coordinates on the Hot/Crazy Scale. Ideally, your chick is right on the line, but if she's anywhere above it, run away.
